ABSTRACT:

    A method for remotely selecting and ordering
photographic prints, includes
the steps of: sending a photographic film bearing a
plurality of latent images
to a photofinisher; developing the photographic film to
produce visible images
and scanning the visible images to create a digital image
file at the photo
finisher; producing an index print having a plurality of
images from the
photographic film along with an index number associated
with each image and an
order number; sending the index print to a customer;
selecting images for which
prints are desired from the index print; ordering
photographic prints via
telephone from the customer's home to the photofinisher,
specifying the order
number and the index numbers associated with the images for
which prints are

Number of Drawing Sheets: 4

---------- KWIC ---------

Detailed Description Text - DETX (9):
    Services which may be ordered include requesting a Photo
CD.TM. from the
digital image file whose images appear on the index print.
Digital
enlargements may be made from selected digital image files
whose images appear
on the index print. Digital prints, enlargements, and
other image bearing
items made from selected digital image files may be sent
directly to the
customer or to any person designated by the customer.
Digital greeting cards
or business cards may be made from selected digital
negatives. Other products
and services such as images inserted in pre-prepared
templates, printed album
pages, collages, recorded voice messages, etc. can be
offered. Additionally,
for a nominal fee, the customer can extend the length of
time their digital
negatives are stored.

Claims Text - CLTX (11):
    3. The method for remotely selecting and ordering
photographic prints
claimed in claim 1, further comprising providing other
image related services
selected from the group of greeting cards, business cards,
image bearing

articles, printed album pages, collages, a Photo CD.TM.
along with the
photographic prints.

desired; and making photographic prints of the selected images at the
photofinisher and sending the photographic prints to the customer.

and re-linking. By
replacing the reference to the selected library with a
reference to a second
selected table, a second selected library links to the
application. A data
record associated with the selected library enables
additional functionality of
the selected library.

Detailed Description Text - DETX (168):
    The application used in this example is a version of an
existing COM
application, Microsoft Corporation's Microsoft Picture
It!.RTM.. Picture
It!.RTM. is a consumer application for manipulating
digitized photographs.
Taking input from high-resolution, color-rich sources such
as scanners and
digital cameras, Picture It!.RTM. produces output such as
greeting cards,
collages, or publications. Picture It!.RTM. provides
tools to select a subset
of an image, apply a set of transforms to the subset, and
insert the
transformed subset into another image. The original
Picture It!.RTM.
application is entirely designed to run on a single
computer. It provides no
explicit support for-distribution. Picture It!.RTM. is
composed of
approximately 112 COM component classes in 1.8 million
lines of C++ source
code.

US-PAT-NO: 6499137

DOCUMENT-IDENTIFIER: US 6499137 B1

TITLE: Reversible load-time dynamic linking

DATE-ISSUED: December 24, 2002

INVENTOR-INFORMATION:
NAME   CITY
STATE   ZIP CODE   COUNTRY
Hunt; Galen C.   Bellevue   WA
        N/A   N/A

US-CL-CURRENT: 717/164, 717/177

ABSTRACT:

    A library links to a compiled application using the
following variation of
load-time dynamic linking. At some point prior to linking,
a user selects a
library for linking to the compiled application. An
association is made
between the selected library and any external libraries
referenced within the
compiled application. For example, if the application is
in Common Object File
format, a new import table lists the selected library and
the external
libraries of the original import table. At link time, the
selected library and
the external libraries link to the compiled application.
At load time, the
application, selected library, and any external libraries
load. When the
selected library loads first, a function in the selected
library performs
operations before the application or external libraries
load. A pointer
references the list of libraries to be linked to the
compiled application. The
initial state of this pointer is archived. The linking
process becomes
reversible by restoring the initial state of the pointer
